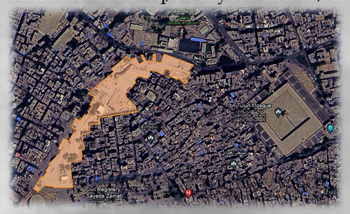
Maria Youhanna 220335 — Mennatallah Hssa 222353

Salma Mohamed 222231

The Tulunid waterwheel in Cairo is a significant heritage site that has unfortunately become a dumping ground for garbage over the years. The aim of this project is to revitalize the site & transform it into a vibrant urban park that will serve as a recreational space of the surrounding residents. The park will also incorporate amenities such as seating areas, walking paths, green spaces, & cultural elements that celebrate the history of the waterwheel.

SITE LOCATION:

Ahmed Ibn Tulun sq, Al Sayeda Zeineb, Cairo



LAYOUT 1:400

LANDMARKS

EXISTING PROBLEMS:

Whatever gets damaged, people dont replace it.

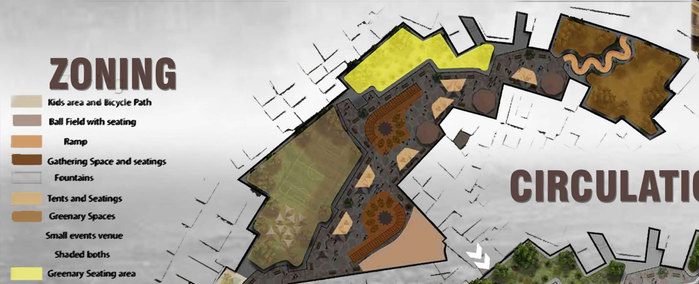
The site has lost its identity

large areas of trash being thrown

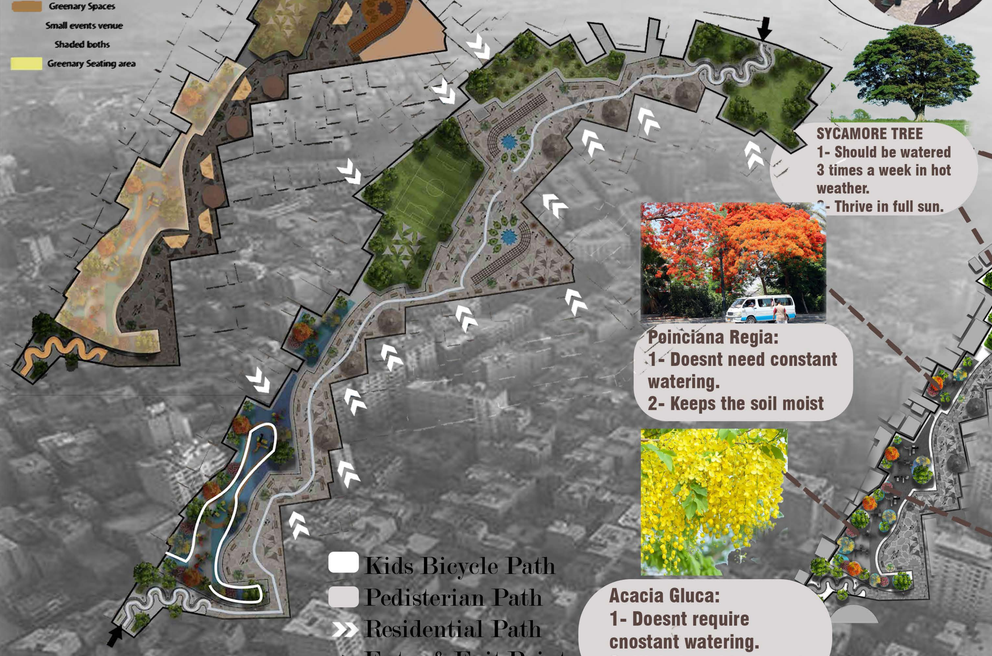
Children has no space for them, thuse playing anywhere

Cars pass by very quickly in very dangerous narrow street

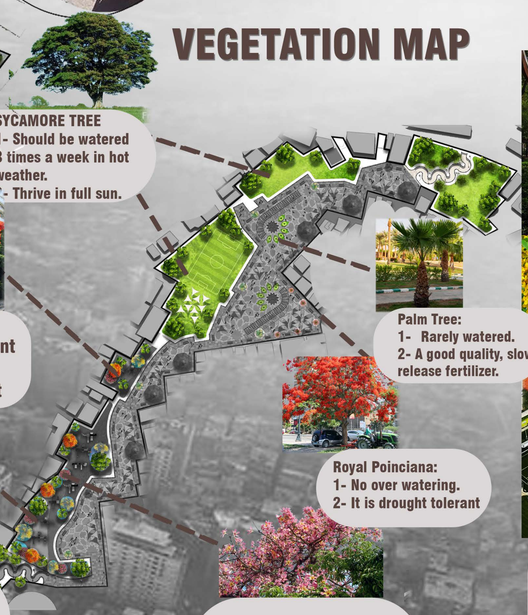
ZONING



CIRCULATION



VEGETATION MAP



SYCAMORE TREE
1- Should be watered 3 times a week in hot weather.
2- Thrive in full sun.

Poinciana Regia:
1- Doesnt need constant watering.
2- Keeps the soil moist

Palm Tree:
1- Rarely watered.
2- A good quality, slow release fertilizer.

Royal Poinciana:
1- No over watering.
2- It is drought tolerant

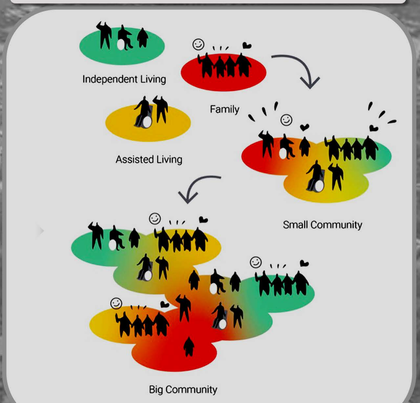
Acacia Gluca:
1- Doesnt require cnostant watering.
2- High drought tolerant.

Nerium Oleander:
1- watering occasionally.
2- responds well to drought.

STRATEGY FOR DESIGNING:

Our goal of creating a beautiful, breathable urban park was achieved by adding oriental and classic yet up to date shading systems for people to seat underneath, by increasing the vegetation in the area and adding fountains to allow for a more breathable space, by adding shops that would increase the job opportunities, and by creating a safe zone for children to hangout.

GOALS ACHIEVED:

1- DESIGN PRINCIPLES


2- SENSE OF MULTI GENERATIONAL COMMUNITY
